DAY 2 — READING, VIDEOS AND SELF-CHECK

Day 2 self-study

Seven short readings, six introductory videos and six self-check questions. Work through them after today's Skill Builder course.

One short reading for each Day 2 topic

Official documentation pages, about 10 to 15 minutes each. Click a title to open it.

TOPIC	PAGE	WHAT TO LOOK FOR
CONVERSE	Inference using the Converse API	How the client sends messages and reads the reply.
RESPONSE	Converse API reference	stopReason, usage and the output blocks to check first.
STREAMING	ConverseStream API reference	The events of a streamed response, in order.
STRUCTURED	Get validated JSON results from models	How to ask for JSON output and validate it.
PROFILES	Global cross-Region inference	How the global profile differs from the EU profile.
LIFECYCLE	Model lifecycle	Active, Legacy and End-of-Life, and what each means.
RETRIES	Retry behavior (AWS SDKs and Tools)	Retry modes, backoff and jitter in the AWS SDKs.

DAY 2 — SELF-STUDY · VIDEO

Introductory videos on YouTube

Short English introductions to each Day 2 topic. Click a title to open it.

TOPIC	YOUTUBE VIDEO	CHANNEL · WHY WATCH
MODEL CHOICE	Mastering model choice: the 3-step Bedrock advantage	AWS Events · re:Invent 2025 session (AIM391).
MODEL CHOICE	Model Evaluation in Bedrock to choose the right FMs	Amazon Web Services · compare models on your own tests.
CONVERSE	Amazon Bedrock Converse API	Sébastien Stormacq · a short introduction to Converse.
CONVERSE	Why you should use the Converse API in Amazon Bedrock	Code & bird · one API for many models.
STREAMING	Mastering Converse and ConverseStream	QuickTechie · AIP-C01 module on both calls.
RETRIES	Retry storms: exponential backoff with jitter	SystemDR · why the client waits a random time.

SELF-STUDY · SELF-CHECK

Answer these without your notes

- Why does an on-demand call from London need an inference profile, and what does the eu. prefix tell you?
- How do you check where the EU profile can send a call, and what must IAM allow?
- A model's lifecycle status is Legacy. Can a new project adopt it, and what happens at End-of-Life?
- What does the client check in a Converse response before it uses the text?
- How do you calculate the cost of one call, and what do you record when usage is missing?
- Which errors does the client retry, and why doesn't it retry a timeout?
