TENTH REVOLUTION | Powered by Revolent

DAY 1 — READING, VIDEOS AND SELF-CHECK

Day 1 self-study

Six short readings, seven introductory videos and six self-check questions. Work through them after today's Skill Builder course.

DAY 1 — SELF-STUDY · READING

One short reading for each Day 1 topic

Official AWS pages, about 10 to 15 minutes each. Click a title to open it.

TOPIC	AWS PAGE	WHAT TO LOOK FOR
IDENTITY	Identify AWS resources with ARNs	The ARN format part by part.
PERMISSIONS	Policy evaluation within a single account	Explicit deny, allow, otherwise implicit deny.
PROFILES	Geographic cross-Region inference	Where an EU profile sends a call, and what IAM checks.
QUOTAS	How tokens are counted in Amazon Bedrock	Why output tokens count more against the quota.
COSTS	Managing your costs with AWS Budgets	What a budget alert does, and what it doesn't.
SCOPE	Generative AI Security Scoping Matrix	The five scopes; Support Assistant v1 is Scope 3.

DAY 1 — SELF-STUDY · VIDEO

Introductory videos on YouTube

Short English introductions to each Day 1 topic. Click a title to open it.

TOPIC	YOUTUBE VIDEO	CHANNEL · WHY WATCH
IDENTITY	AWS IAM tutorial for beginners	AWS with Jaymit · users, groups, roles and policies.
PERMISSIONS	Implicit and explicit deny at AWS: 1-minute IAM lesson	Cloud Bart · the two kinds of refusal.
PERMISSIONS	IAM Policy Evaluation Series: policy language explained	Amazon Web Services · how a statement is read.
BEDROCK	What is AWS Bedrock? Explained in 5 minutes	Shriram Vasudevan · a quick overview of the service.
PROFILES	Amazon Bedrock inference APIs and profiles	AWS Events · AWS Show and Tell, S1E13.
QUOTAS	Amazon Bedrock: what are tokens?	AWS Developers · what quotas and prices count.
COSTS	AWS Budgets tutorial: set up alerts for AWS billing	Amazon Web Services · a budget with alerts, step by step.

SELF-STUDY · SELF-CHECK

Answer these without your notes

- How does an assumed-role ARN differ from an IAM user ARN, and which one does the access portal give you?
- An identity policy allows an action, and another policy explicitly denies it. What does IAM decide, and why?
- Why can a call through the EU inference profile be refused when the policy allows the source Region?
- A request returns ThrottlingException. Which two quotas could it have reached?
- Why does a budget alert on its own not stop a large bill, and what does?
- Support Assistant v1 is a Scope 3 workload. What change would make it Scope 4?
