DAY 3 — READING, VIDEOS AND SELF-CHECK

Day 3 self-study

Six short readings, six introductory videos and six self-check questions. Work through them after today's Skill Builder course and Exercise 3.

DAY 3 — SELF-STUDY · READING

One short reading for each Day 3 topic

Official documentation pages, about 10 to 15 minutes each. Click a title to open it.

TOPIC	PAGE	WHAT TO LOOK FOR
TOOLS	Use a tool to complete a Bedrock model response	The Converse tool-use exchange, step by step.
TOOLS	Tool use with Claude	Client tools, tool_use and tool_result blocks.
MCP	What is the Model Context Protocol (MCP)?	How an MCP server lists tools to a client.
SCHEMA	JSON Schema: creating your first schema	Write the input schema that the validator checks.
INJECTION	OWASP LLM01:2025 Prompt Injection	Direct and indirect injection, and the defences.
AGENTS	Building effective AI agents (Anthropic)	Loops, stopping conditions and human checkpoints.

DAY 3 — SELF-STUDY · VIDEO

Introductory videos on YouTube

Short English introductions to each Day 3 topic. Click a title to open it.

TOPIC	YOUTUBE VIDEO	CHANNEL · WHY WATCH
TOOLS	What is tool calling? Connecting LLMs to your data	IBM Technology · who asks for a tool and who runs it.
TOOLS	Integrating tools with the Bedrock Converse API	AWS Developers · tool use with Converse in code.
MCP	What is MCP? Integrate AI agents with databases & APIs	IBM Technology · a plain introduction to MCP.
MCP	How Model Context Protocol (MCP) actually works	Google Cloud Tech · clients, servers and tool lists.
INJECTION	What is a prompt injection attack?	IBM Technology · direct and indirect injection.
APPROVAL	Human-in-the-loop for AI agents: patterns	Temporal · approval gates before an action runs.

SELF-STUDY · SELF-CHECK

Answer these without your notes

- In a Converse tool exchange, who runs lookup_case: the model or the application?
- Which three parts make up a tool definition, in Converse and in MCP?
- Why does the application validate a tool's input against its schema before running it?
- When does the loop check its limits, and which two limits does it check?
- Why does a draft reply wait in pending_approval?
- A case note asks the assistant to confirm a credit. Why can't the note authorise it?
